

BRUSHING MACHINE HAMBO DSP

The DAMAS HAMBO is a durable brushing machine for mainly used for grass or clover seeds. It is easy to operate, service and maintain and is built to last.

The Hambo is a solid construction, consisting of a frame and a housing of steel, a tripartite rotor with exchangeable beaters, an exchangeable scarifying basket, a driving mechanism with geared motor and an outlet hopper of steel.

Basket and beaters can be inspected and accessed through large doors in both sides of the machine. The beaters can be replaced by brushes in a special brush holder.

BRUSHING MACHINE HAMBO DSP

Function

The material to be treated (1) is led into the scarifying basket (4) by means of the feed worm (2). Grass or clover seeds are separated from the seed coats (the capsules or the flowers), double seeds are divided and dehulling is done by means of the rotor (3). The material is then led to an outlet hole in the opposite end or through the clipper-de-awner wire mesh to the outlet hopper (6). The outlet hole (5) is provided with a weighted flap.

Specifications	Unit	
Guiding capacity, normal rye grass	t/h	0,8
Scarifying basket	mm	Ø800 × 1245
Motor	kW	22
Dimensions	mm	
Width		1130
Length		2020
Height		1650
Weight	kg	750
